## What is Laboratory Porcelain?

Laboratory Porcelain results from thousands of years of systematic development of porcelain itself – an impervious silicate material that is made by firing a mixture of natural minerals such as china clay, quartz and feldspar.

Haldenwanger has been manufacturing Laboratory Porcelain for more than 150 years and development is still ongoing. New market demands in terms of form and quality mean continual custom. Many standard products must comply with a range of different national norms. Laboratory Porcelain is mainly used in industrial laboratories and research institutes worldwide as an aid in chemical analyses and preparation work.

The properties of Haldenwanger Laboratory Porcelain correspond to the DIN EN 60672 standard, group 100, type 110. Temperature stability and resistance to physical and chemical attack are important characteristics. Consistent quality is ensured through strict control of raw materials and production. Laboratory Porcelain is a potassium aluminium silicate. Under the microscope, a transparent cut shows that Haldenwanger Laboratory Porcelain is a material in which scorched and prismatic mullite crystals ( $3\text{Al}_2\text{O}_3 \cdot 2\text{SiO}_2$ ) are embedded in a glass matrix. As a silicate, Haldenwanger Laboratory Porcelain is very resistant to all types of acids, even at boiling temperatures, with the exception of hydrofluoric acid.

Although less resistant to warm and highly concentrated alkalis than to acids, it still performs better than glass. Molten alkali salts attack laboratory porcelain. Its resistance to high temperatures comes from the mullite structure of the material. Although its glass phase softens at very high temperatures, the mullite structure has a stabilising effect and prevents deformations. Therefore, unglazed Laboratory Porcelain can be used at temperatures of up to 1350 °C according to the application. Glazed Laboratory Porcelain can be used at temperatures of up to 1000 °C. After that, the glaze begins to soften.

## Why should I use Haldenwanger Laboratory Porcelain?

### Quality and resistance for more than 150 years

Despite our long history, we have taken care to maintain the original size and shape of our products. New challenges in an ever-growing market have led us to new developments. Ensuring the best refractoriness and resistance to physical and chemical attack has always been of the utmost importance to us.

We guarantee consistently high standards by performing quality checks at all levels, e.g. on raw materials, in the forming process and during final product inspection. To this end, we have established our own state-of-the-art testing and development centre as well as a pilot plant. Our products are continuously tested to comply with DIN 12851 regulations.

#### 1. Imperviousness of the ceramic body

No single area of any sample may show:

- any kind of discoloration in glaze-free areas
- penetration of dye between the ceramic body and glazing

#### 2. Dense glazing (no pores, no cracks)

No single sample may show trajectories of excess glazing slurry or any discoloration along the edges.

#### 3. Thermal shock resistance

No single sample may fail by fracture and no crazing may appear after quenching.

#### 4. Refractoriness of the glazing up to 900 °C

Glazed pieces may not stick together at 900 °C.

#### 5. No weight change during annealing

No single sample may show a weight change exceeding 0.1 mg per 10 g material.

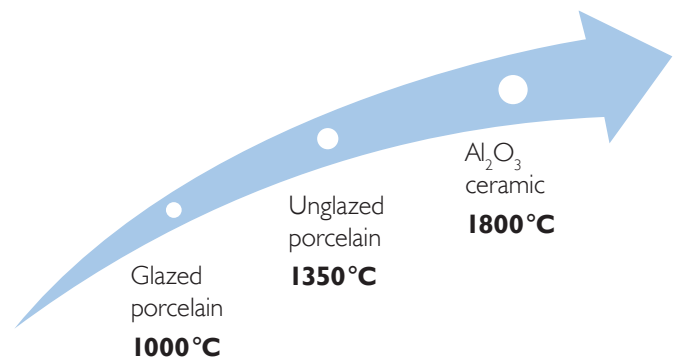

#### 6. Chemical resistance to hydrochloric acid, soda and caustic soda

No single sample may show a weight loss of more than:

- 1 mg per 1 dm<sup>2</sup> of the wetted inner surface area (hydrochloric acid)
- 10 mg per dm<sup>2</sup> of the wetted inner surface area (diluted soda)
- 60 mg per dm<sup>2</sup> of the wetted inner surface area (caustic soda)

### Technical support

As a producer of high-performance ceramics, Haldenwanger offers not only the best materials but also technical support with materials selection and application. Our laboratory ceramics portfolio includes products that deliver temperature stability up to 2000 °C (as for instance ZrO<sub>2</sub> – materials on request).

Material	Application temperature	WAK* 10 <sup>-6</sup> K <sup>-1</sup>
Glazed porcelain	1000 °C	5.3
Unglazed porcelain	1350 °C	5.3
Al <sub>2</sub> O <sub>3</sub>	1800 °C	8–9

Please note that all values quoted (page 4–5) are based on test specimens and may vary according to component design. These values cannot be guaranteed and can only be transferred to other forms and dimensions to a limited extent. They should be used for guidance only. In the field, for example, Alsint 99.7 moulded pieces demonstrate mechanical strength values between 160 and 300 MPa, depending on wall thickness, actual shape, surface finish, the shaping process and post-processing.

Being a member of the VGKL (Verband des Groß- und Außenhandels für Krankenpflege- und Laborbedarf), a trade association for leading wholesalers of laboratory equipment, we have always been at the cutting edge of technology. In addition, Haldenwanger offers training courses in the theory and usage of Laboratory Porcelain.

## Aggressive reagents

### Laboratory Porcelain

All acids (20 °C):	Chemical resistance excellent*
All acids (boiling):	excellent*
Warm, highly-concentrated alkaline solutions:	good
Molten alkaline salts:	unsuitable

\*Except hydrofluoric acid

### Alsint 99.7 Oxide Ceramics

All acids (20 °C):	excellent*
All acids (boiling):	excellent*
Warm, highly-concentrated alkaline solutions:	good
Molten alkaline salts:	unsuitable

\*Exception: highly concentrated hydrofluoric acid, boiling phosphoric acid, boiling potassium hydroxide and sodium hydroxide solutions

## High temperatures

Glazed Laboratory Porcelain:	Heat resistant up to max. 1000 °C
Unglazed Laboratory Porcelain:	up to max. 1350 °C
Alsint 99.7 Oxide Ceramics:	up to max. 1800 °C

## High-wear conditions

For example:

- mortar and pestle
- ball mill
- mouthpieces
- shaft-protection sleeves, etc.

## New developments

We are constantly optimising our Laboratory Porcelain to meet your needs.

## Highest standards

- Our Laboratory Porcelain complies with DIN EN 60672-3, Group C 100, Type C 110.
- Laboratory articles made of Alsint 99.7 Oxide Ceramics comply with DIN EN 60672, Group C 700, Type C 799.

Stringent product controls, from the raw materials to the finished product, ensure the consistently high quality of our products.

Laboratory Porcelain	Unit	Hard porcelain	Pythagoras
Type according to DIN EN 60672-3	–	C 110	C 610
Range of application	–	Laboratory Porcelain	Chemical-technical products
Water absorption capacity	%	≤ 0.2	≤ 0.2
Bulk density	g cm <sup>-3</sup>	2.4	2.6
Flexural strength 20 °C (3-point)	MPa	70–90	120
Thermal expansion 20–1000 °C	10 <sup>-6</sup> K <sup>-1</sup>	5.3	6
Thermal conductivity 200 °C	Wm <sup>-1</sup> K <sup>-1</sup>	1.4	2
Maximum temperature exposure	°C	1350 unglazed/1000 glazed	1400 unglazed

Oxide Ceramics	Unit	Alsint 99.7*	Alsint porous
Al <sub>2</sub> O <sub>3</sub> content	%	99.7	99.5
Alkali content	%	0.05	0.05
CaO stabiliser content	%	–	–
Type according to DIN VDE 0335	–	C 799	–
Water absorption capacity	%	≤ 0.2	2–3.5
Bulk density	g cm <sup>-3</sup>	3.75–3.94	3.5–3.6
Flexural strength 20 °C (3-point)	MPa	300	70–110
Young's modulus	GPa	300–380	–
Hardness (Mohs' scale)	–	9	–
Thermal expansion 20–1000 °C	10 <sup>-6</sup> K <sup>-1</sup>	8–9	8–9
Thermal conductivity 20–100 °C	Wm <sup>-1</sup> K <sup>-1</sup>	25	–
Thermal shock resistance	–	good	good
Average pore diameter	µm	–	1–3
Specific thermal capacity 20–100 °C	J kg <sup>-1</sup> K <sup>-1</sup>	900	–
Maximum temperature exposure**	°C	1800	1700

\*We recommend that products be heated at a rate not exceeding 30–50 °C per hour, \*\*dependent on load

## Haldenwanger quality – the proven best!

Haldenwanger crucibles shown before (left) and after (right) anneal testing. The result confirms the thermal stability of the glazing, even after multiple testing cycles.

Competitor crucibles shown before (left) and after (right) anneal testing. Significant discoloration can be detected after the first anneal cycle.

### **Why is thermal shock resistance of the utmost importance for Laboratory Porcelain?**

Thermal shock resistance as described in DIN 51068 is a material's response to repeated subjection to thermal stresses occurring in (rapidly) changing temperature fields. Heating of and cooling of laboratory ceramics may lead to thermal stresses within the ceramic body. Compressive and tensile stresses may form due to the temperature gradients within the material.

In extreme situations, local stresses may exceed the strength level of the material, resulting in cracking. Thus, excellent thermal shock properties are most important for the longevity of Laboratory Porcelain.

### Pointers on the correct use of laboratory porcelain:

The expected lifetime of Laboratory Porcelain is a function of various factors such as heating and cooling rates, the degree of filling (half/completely filled), the homogeneity of the filling within the crucible, the geometry of the crucible (round/angular, wall thickness, radii, transitions), usage (e.g. during cleaning), etc.

**In order to avoid damaging the material, please heed the following guidelines:**

#### Maximum temperature:

- glazed porcelain 1000 °C
- unglazed porcelain 1350 °C
- $\text{Al}_2\text{O}_3$  crucibles 1800 °C

#### Maximum heating rate of porcelain crucibles:

- porcelain crucibles 150 °C/h
- $\text{Al}_2\text{O}_3$  crucibles 50 °C/h

At higher application temperatures (> 400 °C), curved crucibles 33 and 33 D should preferably be used over the angular crucible 33 C.

#### Minimum degree of filling:

- choose the right size according to the content, minimum degree of filling 75% (to avoid temperature differences)
- homogeneous filling within the crucible

#### Operation during cool-down phase:

- only use pre-heated crucible tongs
- place hot crucibles on porous ceramic materials only, such as R-SiC or alumo-silicate materials

### Custom ceramics

The following pages will provide an overview of our current Laboratory Porcelain product range. In addition, we offer bespoke products in variable material and shape/size combinations. Also, we can apply your logo, serial numbers and barcodes on the glazing.

Haldenwanger is your number one specialist in high-temperature and laboratory ceramics. Thanks to our more than 150 years of experience, we can offer the ideal solution.

**We would be pleased to advise you – in many European languages!**

## Mortars

### Article no. 55

With spout

$T_{\max}$  depends on the application, but should not exceed 200 °C.

Size	DIN	Inner Ø mm	Height mm	Capacity approx. ml	Sales unit unglazed	Sales unit glazed
00	12906	50	32	20	20	10
0 a		65	40	70	20	10
1		70	45	75	20	10
2	12906	80	50	100	10	10
3		90	55	170	10	10
4	12906	115	63	300	10	5
5	12906	130	65	400	5	5
6 a	12906	150	70	700	5	5
8	12906	180	80	1,000	2	1
11	12906	240	100	2,600	1	1
15	12906	330	140	6,000	1	1

When ordering, please specify whether the grinding surface should be glazed or unglazed.

## Pestles

### Article no. 56

$T_{\max}$  depends on the application, but should not exceed 200 °C.

Size	DIN	Length Ø mm	Head Ø mm	Sales unit unglazed	Sales unit glazed
000	12906	100	22	20	10
00		115	24	20	10
0 a		125	28	20	10
1	12906	135	30	20	10
2	12906	150	36	10	10
3	12906	175	42	10	10
4	12906	180	45	10	5
5		185	48	5	5
6 a		210	55	5	5
8	12906	215	60	2	1

When ordering, please specify whether the grinding surface should be glazed or unglazed.

## Evaporating basins

### Article no. 109

Form B, semi-deep, with spout, Size 5/0–5 glazed inside and outside

Size 6–10 glazed except outside base

$T_{\max}$  depends on the application, but should not exceed 400 °C.

Size	DIN	Ø mm	Height mm	Capacity approx. ml	Sales unit
5/0	12903	40	16	10	100
4/0	12903	50	20	20	100
000	12903	63	25	40	100
00	12903	70	26	50	100
0		80	34	75	100
1		85	35	95	100

9	12903	240	65	1,750	3
10	12903	300	60	2,500	2

## Incinerating dishes

### Article no. 33

Cylindrical, glazed except outside base

$T_{\max}$  depends on the application, but should not exceed 1000 °C.

Size	Ø mm	Height mm	Capacity approx. ml	Sales unit
1	40	21	15	40
2	50	25	30	30
4	60	31	60	20

### Article no. 33 C

Conical, rectangular, glazed except outside base

$T_{\max}$  depends on the application, but should not exceed 400 °C.

Size	Length mm	Width mm	Height mm	Sales unit
00	48	26	10	30
00 b	55	42	16	20
4 b	70	46	13	20
7	96	55	16	10

### Article no. 33 D

Shallow, glazed except outside base

$T_{\max}$  depends on the application, but should not exceed 1000 °C.

Size	Ø mm	Height mm	Capacity approx. ml	Sales unit
2	37	10	8	40
3	42	11	10	40
4	48	12	15	30

## Flour incinerating dishes

### Article no. 5032

According to Prof. Mohs, glazed except outside base

$T_{\max}$  depends on the application, but should not exceed 1000 °C.

Size	Ø mm	Height mm	Capacity approx. ml	Sales unit
1	56	23	30	100

## Melting crucibles

### Article no. 79

Low shape, glazed, minimum filling level 75%

$T_{\max}$  depends on the application, but should not exceed 1000 °C.

Size	DIN	Upper Ø mm	Height mm	Capacity approx. ml	Lid	Sales unit
000 a	12904	30	20	8	7	100
00	12904	35	23	11	7 a	100
0	12904	40	26	20	6	100
1	12904	45	29	25	5	100
2*	12904	50	32	40	4	100
2 a	12904	60	38	65	3	100
3	12904	70	47	95	2	50
4		83	55	180	1	20

\*Conradson crucible acc. to ASTM D 189-65

### Article no. 79 C

Tall shape, glazed, minimum filling level 75%

$T_{\max}$  depends on the application, but should not exceed 1000 °C.

Size	DIN	Upper Ø mm	Height mm	Capacity approx. ml	Lid	Sales unit
00		26	34	11	8	100
0	12904	30	38	15	7	100

1		82	65	230	1	20
1 a		89	75	300	1 a	10

## Filtering crucibles

### Article no. 84

With porous base

$T_{\max}$  depends on the application, but should not exceed 400 °C.

Size	DIN	Rim Ø mm	Base Ø mm	Height mm	Capacity approx. ml	Sales unit
P2/2	12909	35	24	40	25	1

Porosity: P2  $\approx$  7  $\mu$ m

## Gooch crucibles

### Article no. 82 A

Wide shape, with perforated base, glazed

$T_{\max}$  depends on the application, but should not exceed 600 °C.

Size	Upper Ø mm	Base mm	Height mm	Capacity approx. ml	Sales unit
2	39	25	42	25	15
3	42	26	45	35	10

Lid 79 D, filtering discs 31 B have to be ordered separately.

Filter holes approx. 0.5 mm in Ø

## Gooch crucibles

### Article no. 82 R

Tall shape, with perforated base, glazed

$T_{\max}$  depends on the application, but should not exceed 600 °C.

Size	Upper Ø mm	Base mm	Height mm	Capacity approx. ml	Sales unit
3	35	24	41	25	20

Lid 79 D, filtering discs 31 B have to be ordered separately.

Filter holes approx. 0.5 mm in Ø

## Crucible lids

### Article no. 79 D

$T_{\max}$  depends on the application, but should not exceed 600 °C.

Size	DIN	Inner Ø mm	Sales unit
9		28	50
8		33	50
7	12904	37	50
7 a	12904	45	50

8	12905	320	330	350	150	10,600	55	36	1

## Spot plates

### Article no. 61 A

Rectangular; with 6 wells, glazed

$T_{\max}$  depends on the application, but should not exceed 400 °C.

Size	Length mm	Width mm	Height mm	Cavities			Sales unit
				Number	Ø mm	Depth mm	
3	115	80	12	6	36	11	10

## Spot plates

### Article no. 61 B

Rectangular; with 12 wells, glazed

$T_{\max}$  depends on the application, but should not exceed 400 °C.

Size	Length mm	Width mm	Height mm	Cavities			Sales unit
				Number	Ø mm	Depth mm	
2	119	85	6	12	20	3	10
3	127	97	12	12	25	6	10

## Desiccator plates

### Article no. 119 C

With central hole 20 mm in Ø and filter holes approx. 5 mm in Ø

$T_{\max}$  depends on the application, but should not exceed 600 °C.

Size	DIN	Height mm	Ø mm	Sales unit
90	12911	7.9	90	10
140	12911	8.9	140	10
190	12911	9.4	190	10
235	12911	10.6	235	10
280	12911	10.6	280	1

## Casseroles

### Article no. 17

With porcelain handle, glazed except rim

$T_{\max}$  depends on the application, but should not exceed 400 °C.

Size	DIN	Ø mm	Height mm	Capacity approx. ml	Sales unit
4/0	12907	63	36	80	10
000	12907	80	46	140	10
0	12907	102	58	290	10
2	12907	127	70	500	4
4	12907	160	97	1,300	1
4 b	12907	215	110	2,600	1

## Combustion boats

### Article no. 30

Glazed

$T_{\max}$  depends on the application, but should not exceed 1000 °C.

Size	Length mm	Width mm	Height mm	Sales unit
6	85	13	8	20
7	102	13	10	20
9	130	18	14	10

## Graduated beakers

### Article no. 51

Graduated inside, glazed except outside base

$T_{\max}$  depends on the application, but should not exceed 400 °C.

Size	Base Ø mm	Height mm	Capacity approx. ml	Sales unit
3 a	80	100	250	3
5 a	95	125	500	2
8	110	165	1,000	2
10	140	193	2,000	1
14	190	280	5,000	1

## Ball mills

### Article no. GSK

With lid, metal lock and sealing ring, glazed inside and outside  
 $T_{\max}$  depends on the application, but should not exceed 200 °C.

GSK mill no.	Base Ø mm	Height mm	Capacity approx. ml	Sales unit
0	135	182	1,000	1
0 a	150	222	1,700	1
0 b	200	240	3,000	1
1	225	280	5,000	1
1 x	288	333	10,000	1
1 a	335	360	15,000	1

Unglazed inside available upon request.

## Unglazed balls

### Article no. 42 K

Sales unit each: 5 kg

## Volume recommendations for ball fillings

Mill GSK no.	Capacity approx. l	Ball Ø mm					
		9	15	20	30	40	50
0	1	0.10 kg	0.2 kg	0.2 kg	–	–	
0 a	1.5	0.15 kg	0.3 kg	0.3 kg	–	–	
0 b	3	0.30 kg	0.6 kg	0.6 kg	–	–	
1	5	0.50 kg	1.0 kg	1.0 kg	–	–	
1 x	10	0.50 kg	1.5 kg	1.5 kg	1.5 kg	–	
1 a	15	1.00 kg	1.5 kg	1.5 kg	1.5 kg	2 kg	
Number of balls per kg approx.		1,080	230	95	30	12	6
Ball density per litre approx.		1.35	1.4	1.4	1.3	1.3	1.23

Sealing rings, inner rubber rings and metal locks as spare parts can also be purchased for each type of ball mill.

## Spoon spatulas

Article no. 74

$T_{\max}$  depends on the application, but should not exceed 400 °C.

Size	Length mm	Sales unit
2	121	20
4	170	20
6	210	10
8	305	5

## Clay plates

Porous

$T_{\max}$  depends on the application, but should not exceed 600 °C.

Ø mm	Sales unit
180	20
220	20

## Hard porcelain tubes

Unglazed

$T_{\max}$  depends on the application, but should not exceed 1400 °C

## C and S determination

Outer Ø mm	Inner Ø mm	Length mm	Sales unit
22	17	500	50
22	17	600	50
26	20	500	50
26	20	600	50

## Combustion boats

Unglazed

$T_{\max}$  depends on the application, but should not exceed 1000 °C.

Length mm	Width mm	Height mm	Sales unit
84	14	9	500

## Alsint 99.7 Oxide Ceramics

### Alsint 99.7 combustion boats

### Custom design

We can custom make Alsint 99.7 components to your requirements. Simply send us your detailed specifications and we will provide you with an obligation-free quote. Alsint 99.7 is the material of choice for use under high-wear conditions, in chemical-technical and electrical engineering applications and in high-temperature technology.

### Important information concerning the use of Alsint 99.7 laboratory equipment:

Due to their high refractoriness (melting point above 2000 °C) and chemical resistance to a wide range of substances, crucibles and other devices made of Alsint 99.7 are used in multiple applications. However, these outstanding properties are only fully maintained with proper handling.

### Applications

#### Chemical-technical applications:

- crucibles for crystal growing
- crucibles for fusion processes
- crucibles for annealing

#### High-wear conditions:

- ball mill pots
- milling balls
- mouthpieces
- shaft-protection sleeves

## Alsint 99.7 crucibles

Cylindrical, flat base, minimum filling level 75%

Size	Outer Ø mm	Inner Ø mm	Height mm	Capacity approx. ml	Lid
1 A	20	16	30	5	79 D/9
2 A	30	26	40	15	79 D/8
3 A	35	30	50	30	79 D/7
4 A	40	36	60	60	79 D/7a
5 A	50	44	75	110	79 D/5
6 A	65	55	100	270	79 D/3
7 A	85	75	150	700	79 D/1
8 A	125	110	220	2,200	–

## Alsint 99.7 crucibles

Conical, tall shape, minimum filling level 75%

Size	Upper outer Ø mm	Lower outer Ø mm	Height mm	Capacity approx. ml	Lid
00 B	30	14	24	10	79 D/8
0 B	41	18	37	25	79 D/7a
1 B	48	20	41	40	79 D/5
2 B	54	24	50	60	79 D/4
3 B	60	26	50	80	79 D/4
4 B	66	30	56	100	79 D/3

## Alsint 99.7 crucibles

Conical, low wide shape, minimum filling level 75%

Size	Upper outer Ø mm	Lower outer Ø mm	Height mm	Capacity approx. ml	Lid
00 C	25	15	30	10	–
0 C	30	18	38	15	79 D/8
